Old Tree Publishing CC, in association with www.rapidresultsmethod.com, the website, content, and its representatives Including Russ Horn do not and cannot give investment advice or invite customers or readers to engage in investments through this report or any associated software or any subscription to any part of it.

The information provided in this content is not intended for distribution to, or use by any person or entity in any jurisdiction or country where such distribution or use would be contrary to law or regulation or which would subject us to any registration requirement within such jurisdiction or country.

Hypothetical performance results have many inherent limitations, some of which are mentioned below. No representation is being made that any account will or is likely to achieve profits or losses similar to those shown. In fact, there are frequently sharp differences between hypothetical performance results and actual results subsequently achieved by any particular trading program and method or software. Old Tree publishing by users download and/or use of this report is indemnified fully by any such user in any and all and each respect possible.

One of the limitations of hypothetical performance results is that they are generally prepared with the benefit of hindsight. In addition, hypothetical trading does not involve financial risk and no hypothetical trading record can completely account for the impact of financial risk in actual trading.

For example, the ability to withstand losses or to adhere to a particular trading program or system in spite of the trading losses are material points that can also adversely affect trading results. There are numerous other factors related to the market in general or to the implementation of any specific trading program, which cannot be fully accounted for in the preparation of hypothetical performance results. All of which can adversely affect actual trading results.

We reserve the right to change these terms and conditions without notice. You can check for updates to this disclaimer at any time by visiting www.rapidresultsmethod.com.

Your use and reliance on the materials is based on your acceptance of such Terms and Conditions and policies as appear on the site.

The High Sped Moving Averages.

The RRM system is a great system, but for some traders, they are looking for a little more action in the markets.

The High Speed Moving Averages variation will provide you with a quicker trend change and a lot more trading opportunities.

This won't be for everybody, but if you are eager to find more trades or simply spend less time in front of computer, the high speed moving averages will be for you.

Not everything will change, the DPI will remain the same and so will the PSAR.

"High Speed" is simply a faster, or smaller period settings for each of the moving average. Since the period is smaller, it will react quicker to the changes in the market.

All the rules of the system will stay as they were. The different setups will all remain and the different market phases will also remain the same. Everything will be as it is in the standard settings, the only difference being the action of the moving averages is increased.

For these examples, we will be using the opened DPI with the green nested histogram. If you have not yet done this to your DPI, you can refer to the PDF called Opening the DPI.

Let's get started…

Changing the charts

This is what the system looks like right now:

He Ribbon is composed of the yellow 5 EMA and the red 13 EMA
The blue line is the 34 EMA
The white line is the 89 EMA

You can see that there is a lot of trending going on, both up and down. Here are potentially some good signals in there, but also there are a few near misses. There are trades that we would have taken if the price had pulled back just a little bit farther.

If we speed up the moving averages a little, we won't mess with the integrity of the trading system, but we will be able to capitalize on a few trades that we might not otherwise have been able to take.

Here are the changes to the moving averages we are going to make:

5 EMA becomes (➔) the 3 EMA
7 EMA ➔ 5 EMA
9 EMA gets deleted
11 EMA ➔ 6 EMA
13 EMA ➔ 8 EMA

34 EMA➔21 EMA

89 EMA ➔ 55 EMA

Here's how we go about making those changes:

1. First, double-click the yellow 5 EMA. The properties box will pop up. Under the Parameters tab, change the Period setting from 5 to 3 and then click OK. The yellow moving average will now be a 3 EMA.

2. Second, look at the 3 dotted moving average that make up the "fill" of the ribbon. Delete the center one, the 9 EMA. Right-click on the 9 EMA and from the menu box that pops up, click "Delete indicator".

3. Third, the dotted fill line, the 7 EMA that is closest to the Yellow 3 EMA, right-click on this 7 EMA. The properties box will pop up. Under the Parameters tab, change the Period setting from 7 to 5 and then click OK.

4. Forth, the dotted fill line, the 11 EMA that is closest to the Red 13 EMA, right-click on this 11 EMA. The properties box will pop up. Under the Parameters tab, change the Period setting from 11 to 6 and then click OK.

5. Fifth, double-click the red 13 EMA. The properties box will pop up. Under the Parameters tab, change the Period setting from 13 to 8 and then click OK.

So far, the changes you have made to your chart will look like this, they will be subtle, but there none the less and so far only to the Ribbon:

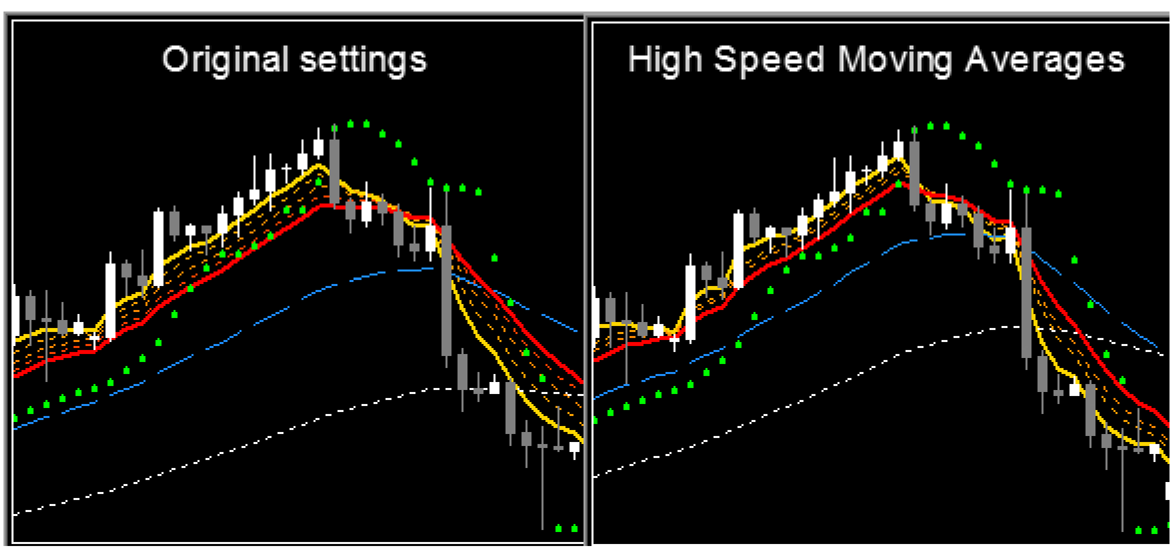
6. Sixth, double-click the blue 34 EMA. The properties box will pop up. Under the Parameters tab, change the Period setting from 34 to 21 and then click OK.

7. Seventh, and finally, double-click the white 89 EMA. The properties box will pop up. Under the Parameters tab, change the Period setting from 89 to 55 and then click OK.

There we have it. The High Speed Moving Averages variation. Simple, but quicker.

Your charts will look like this in the end:

They look almost Identical, but when you compare the two sets of charts, you can indeed see a difference:



Market Phases will remain the same:

- Unordered, the 8 EMA is in between the 21 EMA and the 55 EMA

- Bullish Emerging Phase, 8 EMA over the 55 EMA over the 21 EMA
- Bearish Emerging Phase, 8 EMA under the 55 EMA under the 21 EMA

- Bullish trending Phase, 8 EMA over the 21 EMA over the 55 EMA
- Bearish Trending Phase, 8 EMA under the 21 EMA under the 55 EMA.

Setups will remain the same:

- Ribbon Trade, price pulls back and touches the 8 EMA and close past the 3 EM Ain the direction of the trend.

- Ghost Trade, price pulls back and touches the 21 EMA and closes past the 8 EMA in the direction of the trend.

- Shark Trade, price pulls back and touches the 55 EMA and closes pas the 21 EMA in the direction of the trend (the Ribbon stays on the proper side)

With all these setups, we still want to the DPI to be the proper color and the PSAR to be on the right side of the market.

Everything we learned about the original system, only with quicker moving averages.
