Trading any financial market involves risk. This report and all and any of its contents are neither a solicitation nor an offer to Buy/Sell any financial market.

The contents of this report are for general information and educational purposes only (contents shall also mean the website www.rapidresultsmethod.com or any website the content is hosted on, and any email correspondence or newsletters or postings or affiliate site as related to such website). Every effort has been made to accurately represent this product and its potential. There is no guarantee that you will earn any money using the techniques, ideas and software in these materials. Examples in these materials are not to be interpreted as a promise or guarantee of earnings. Earning potential is entirely dependent on the person using our product, ideas and techniques. We do not purport this to be a "get rich scheme."

Although every attempt has been made to assure accuracy, we do not give any express or implied warranty as to its accuracy. We do not accept any liability for error or omission. Examples are provided for illustrative purposes only and should not be construed as investment advice or strategy.

No representation is being made that any account or trader will or is likely to achieve profits or losses similar to those discussed in this report or anywhere on www.rapidresultsmethod.com. Past performance is not indicative of future results.

By purchasing and/or using any content or product including material herein contained, subscribing to our mailing list or using the website or contents of the website or materials provided herewith, you will be deemed to have accepted these terms and conditions in full as appear also on our site, as do our full earnings disclaimer and privacy policy and CFTC disclaimer and rule 4.41 to be read herewith. So too, all the materials contained within this course, including this manual, whether they appear on our domain(s) or are in physical form, are protected by copyright. "Warning: The unauthorized reproduction or distribution of this copyrighted work is illegal. Criminal copyright infringement, including infringement without monetary gain, is investigated by the authorities and is punishable with imprisonment and a fine." We reserve all our rights in this regard.

Old Tree Publishing CC, in association with www.rapidresultsmethod.com, the website, content, and its representatives Including Russ Horn do not and cannot give investment advice or invite customers or readers to engage in investments through this report or any associated software or any subscription to any part of it.

The information provided in this content is not intended for distribution to, or use by any person or entity in any jurisdiction or country where such distribution or use would be contrary to law or regulation or which would subject us to any registration requirement within such jurisdiction or country.

Hypothetical performance results have many inherent limitations, some of which are mentioned below. No representation is being made that any account will or is likely to achieve profits or losses similar to those shown. In fact, there are frequently sharp differences between hypothetical performance results and actual results subsequently achieved by any particular trading program and method or software. Old Tree publishing by users download and/or use of this report is indemnified fully by any such user in any and all and each respect possible.

One of the limitations of hypothetical performance results is that they are generally prepared with the benefit of hindsight. In addition, hypothetical trading does not involve financial risk and no hypothetical trading record can completely account for the impact of financial risk in actual trading.

For example, the ability to withstand losses or to adhere to a particular trading program or system in spite of the trading losses are material points that can also adversely affect trading results. There are numerous other factors related to the market in general or to the implementation of any specific trading program, which cannot be fully accounted for in the preparation of hypothetical performance results. All of which can adversely affect actual trading results.

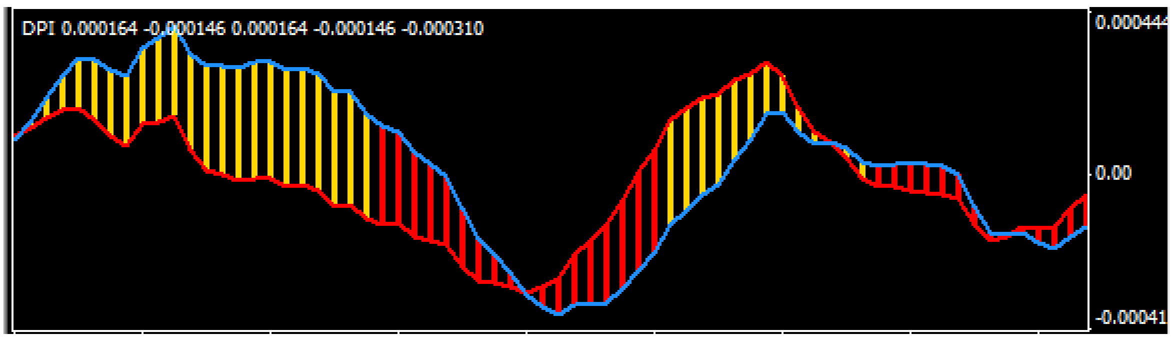
We reserve the right to change these terms and conditions without notice. You can check for updates to this disclaimer at any time by visiting www.rapidresultsmethod.com.

Further details on this are found under the Terms and conditions on our site. Please ensure you read and agree with all Terms and Conditions as set out on our site before using any of the materials. Your use and reliance on the materials is based on your acceptance of such Terms and Conditions and policies as appear on the site.

Opening or Unlocking the DPI

The DPI is a powerful tool and offers so many different uses depending on your style of trade. We can unlock the DPI and expose all of its potential but adding a few minor alterations. We don't change the DPI, what we will do is simply show off its additional features.

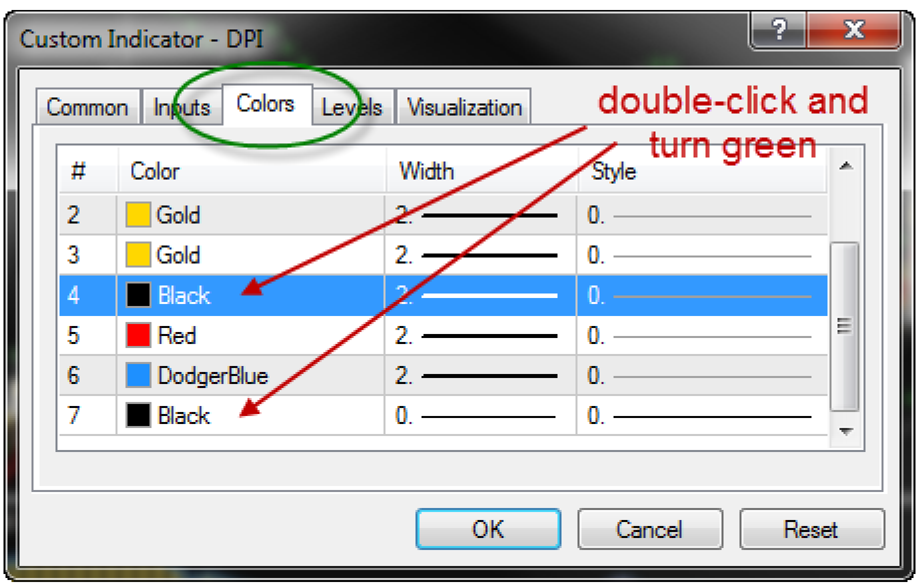
Currently, your DPI will look like this:



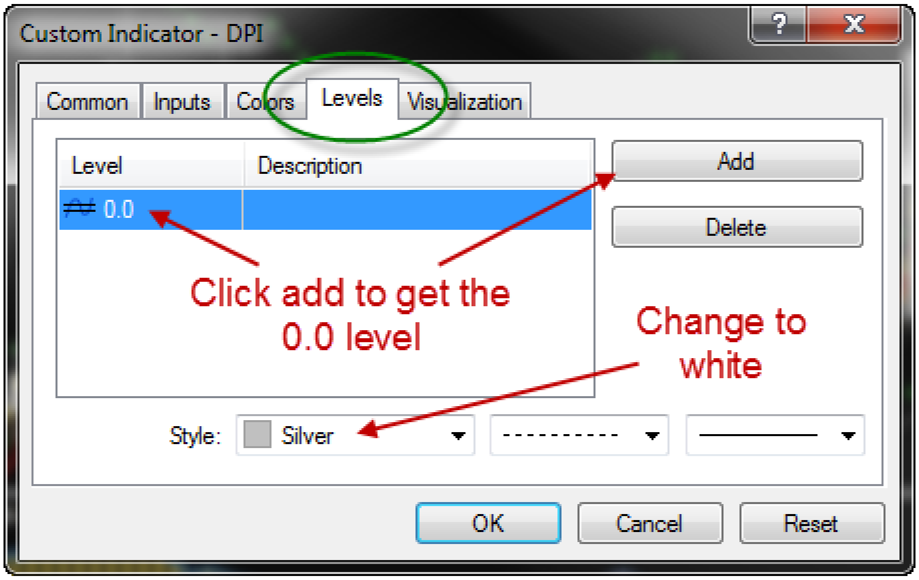
Let's go through the steps of opening up or "unlocking" the DPI:

- Find the DPI on your chart…
- Right-click on the DPI
- In the box that pops up, click on "DPI properties"

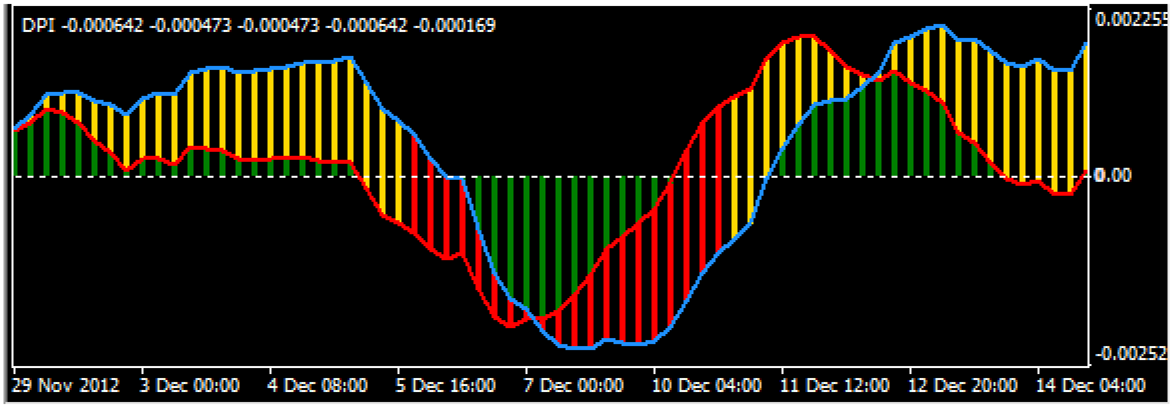
- The DPI properties box will open up
- Under the "Colors" tab, change number 4 and number 7 to a green color (it can be any color you like, just not the color of the background of your chart, for most of us it's black)



- Under the Levels tab, click ADD to automatically add a 0.0 level and then change the "Style" color to white.



- Click OK and you will have your "Opened" DPI, it will look like this:



From here, all the other DPI possibilities are open to us.

Over-Bought and Over-Sold conditions.

One of the best uses of the Opened DPI is the ability to see Overbought and Oversold conditions.

When the market is overbought or oversold, we will find the market will do 1 of 2 things:

1. The market will retrace
2. The market will move sideways

(And occasionally there is a third thing)

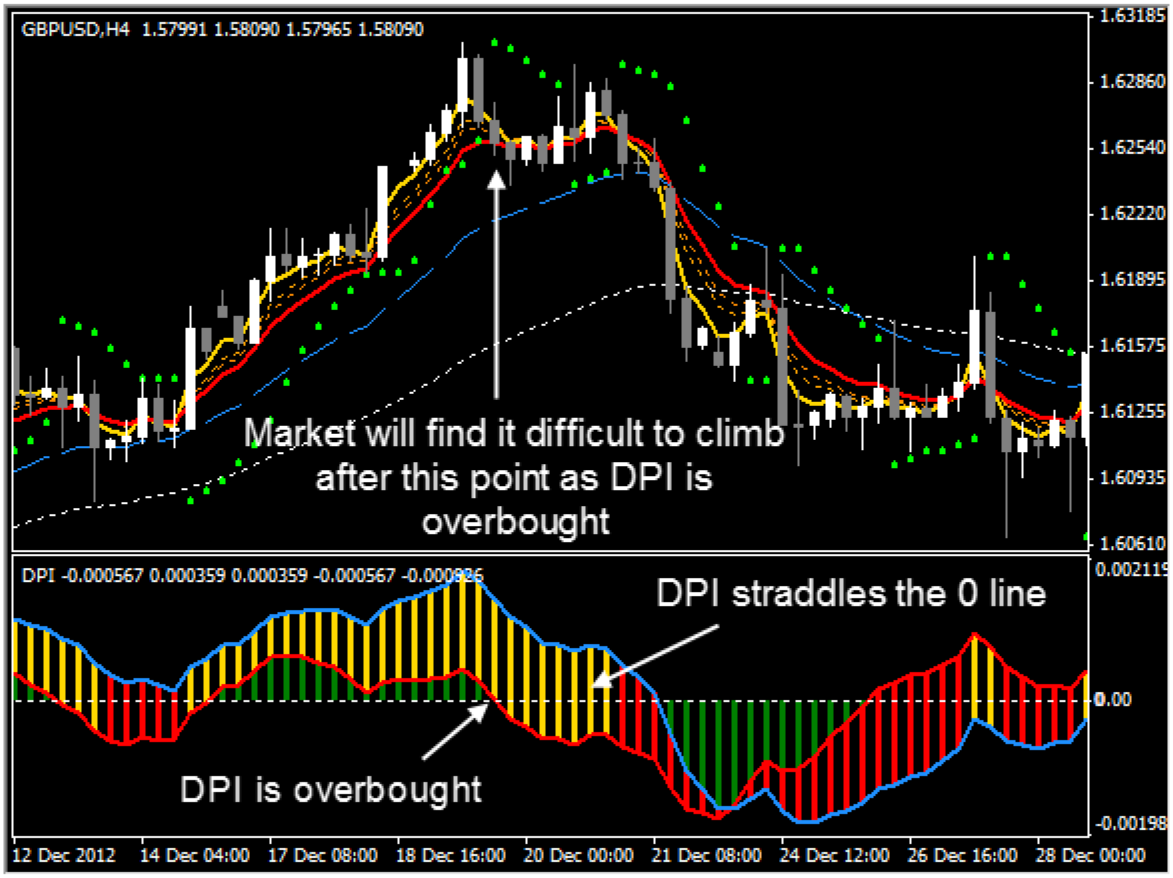
3. Sometimes the trend will over-power these conditions and keep moving forward, but this is not the norm.

Overbought

When the market becomes Overbought, you will see that this is indicated by the disappearance of the green nested histogram. As the price climbs, the DPI will also climb. As both the blue Lead Line and the red Follow Line rise above the 0 line, the green nested histogram will form.

As the price becomes over extended, the Follow Line will often fall first and touch the 0 line. As the DPI touches the 0 line, we will have an overbought condition. The price will find it very difficult to climb much farther after this. When you get a signal to go long just after a vanishing nested histogram, there is a very low probability that the market will have the energy or momentum to follow through.

Below you can see the image of a rising market. The DPI is climbing nicely, but as the market begins to lose steam, the DPI drops back to the 0 line. The Follow line is the line that usually does this first, but it doesn't matter which line touches the 0 line.

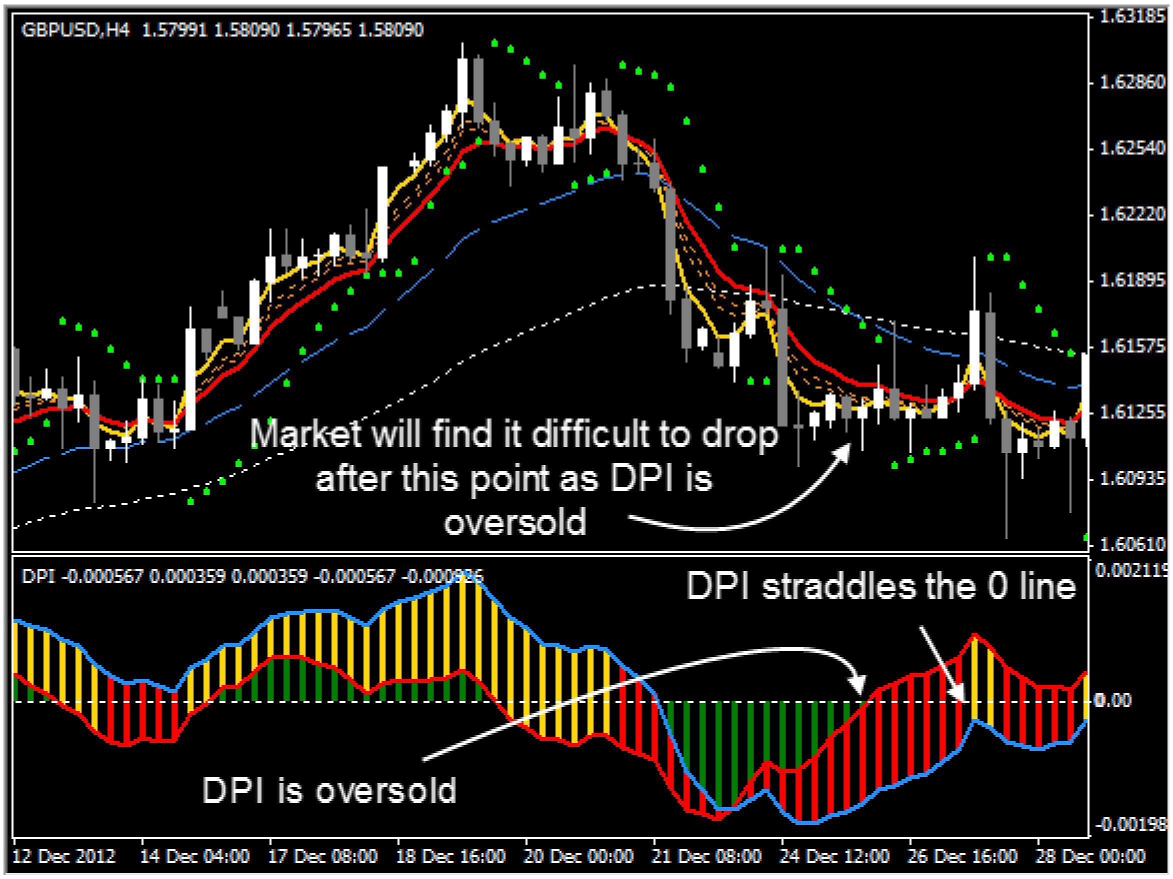


As the DPI histogram now straddles the 0 line, we will see some last ditch pushes up by the market, but they are usually in vein. There will be buy signals in the area, but most of the time they will not be successful.

Taking a trade in an overbought condition is risky business.

Oversold

On the same chart, you will see that the market then drops very nicely. The DPI turns red and as price continues to fall, it takes the DPI with it down below the 0 line. The green nested histogram appears as the market falls. As the market loses its momentum, the DPI becomes oversold and the green nested histogram disappears as the Follow Line touches the 0 level.



There will be attempts to push lower, but as long as the DPI is straddling the 0 line, trading becomes a lower probability proposition.
