The contents of this report are for general information and educational purposes only (contents shall also mean the website www.rapidresultsmethod.com or any website the content is hosted on, and any email correspondence or newsletters or postings or affiliate site as related to such website). Every effort has been made to accurately represent this product and its potential. There is no guarantee that you will earn any money using the techniques, ideas and software in these materials. Examples in these materials are not to be interpreted as a promise or guarantee of earnings. Earning potential is entirely dependent on the person using our product, ideas and techniques. We do not purport this to be a "get rich scheme."

Although every attempt has been made to assure accuracy, we do not give any express or implied warranty as to its accuracy. We do not accept any liability for error or omission. Examples are provided for illustrative purposes only and should not be construed as investment advice or strategy.

No representation is being made that any account or trader will or is likely to achieve profits or losses similar to those discussed in this report or anywhere on www.rapidresultsmethod.com. Past performance is not indicative of future results.

By purchasing and/or using any content or product including material herein contained, subscribing to our mailing list or using the website or contents of the website or materials provided herewith, you will be deemed to have accepted these terms and conditions in full as appear also on our site, as do our full earnings disclaimer and privacy policy and CFTC disclaimer and rule 4.41 to be read herewith. So too, all the materials contained within this course, including this manual, whether they appear on our domain(s) or are in physical form, are protected by copyright. "Warning: The unauthorized reproduction or distribution of this copyrighted work is illegal. Criminal copyright infringement, including infringement without monetary gain, is investigated by the authorities and is punishable with imprisonment and a fine." We reserve all our rights in this regard.

Old Tree Publishing CC, in association with www.rapidresultsmethod.com, the website, content, and its representatives including Russ Horn do not and cannot give investment advice or invite customers or readers to engage in investments through this report or any associated software or any subscription to any part of it.

The information provided in this content is not intended for distribution to, or use by any person or entity in any jurisdiction or country where such distribution or use would be contrary to law or regulation or which would subject us to any registration requirement within such jurisdiction or country.

Hypothetical performance results have many inherent limitations, some of which are mentioned below. No representation is being made that any account will or is likely to achieve profits or losses similar to those shown. In fact, there are frequently sharp differences between hypothetical performance results and actual results subsequently achieved by any particular trading program and method or software. Old Tree publishing by users download and/or use of this report is indemnified fully by any such user in any and all and each respect possible.

One of the limitations of hypothetical performance results is that they are generally prepared with the benefit of hindsight. In addition, hypothetical trading does not involve financial risk and no hypothetical trading record can completely account for the impact of financial risk in actual trading.

For example, the ability to withstand losses or to adhere to a particular trading program or system in spite of the trading losses are material points that can also adversely affect trading results. There are numerous other factors related to the market in general or to the implementation of any specific trading program, which cannot be fully accounted for in the preparation of hypothetical performance results. All of which can adversely affect actual trading results.

We reserve the right to change these terms and conditions without notice. You can check for updates to this disclaimer at any time by visiting www.rapidresultsmethod.com.

Your use and reliance on the materials is based on your acceptance of such Terms and Conditions and policies as appear on the site.

Triple Filtered Forex Trading System

I've got a great system for you today. Its super easy, super simple and I know you're going to absolutely love it!

Don't let that opening statement fool you though, just because it's easy, doesn't mean it's not powerful. In fact, this is extremely powerful. In fact, this is extremely powerful as you're going to see. Some of the biggest traders out there use very, very simple systems with not much on their charts.

In this report, we're going to use one indicator, that's it, just one. Not much simpler than that and there's going to be no guess work involved.

System Components & Indicators

Timeframe:

1 Hour, 15 Minutes, and 5 Minutes

Indicator:

The indicator we're going to use is called the Relative Strength Index, or RSI. The RSI was developed by J. Wells Wilder in the late 1970's as a way to read when a security was overbought or oversold.

Historically, when the RSI reaches over the 70 level, prices are considered to be over bought and are expected to start coming down.

When prices are below the 30 level, they are considered oversold and are expected to soon start rising.

The standard default setting for the RSI is 14 and this is what you see in the pictures below.

Now trading in this fashion can be rather dangerous. As you can see from the pictures above, the RSI can remain at the 70 level or above for quite some time or at the 30 level and below for quite some time, so it's not a good idea to be buying off the 30 level and selling off the 70 level. I've known traders that started out this way and quickly found out that they'd lose money.

One of the other levels used is the 50 level and this is often referred to as the “water mark” for positive sentiment or negative sentiment. When the RSI is above the 50 level, we have a positive or bullish outlook and when it’s below the 50 level, we have a more negative or bearish outlook.

In the example below, you can see that the price keeps rising and the RSI is above the 50 level.

In the example below, you can see the price falling and the RSI is below the 50 level.

This too presents a bit of a problem. In several areas of the chart, the RSI flipped back and forth over the 50 line as the market just chopped and went sideways. So if you were to just blindly buy when the RSI went above the 50 line and sell when it went below the 50 line again, you'd lose money.

So far, this doesn't look too promising does it? Sure, you can catch some great trades, but more often than not, you're going to get burned and the big winners might get you back to break-even but then you're right back where you started - trying to sell into a bull market and buy into a bear market. All the while, the RSI remains overbought or oversold in a strong trend. So we've identified 3 areas where problems can occur.

Now, that being said, the RSI is one of my favourite indicators but there's a trick to it.

The solution, enter the Secret Weapon: Multiple Time frames!

Multiple Time Frames are a great way to add confirmation to an indicator signal and many traders use them, but as we know, 95% of traders fail in this business so apparently they think they're using them correctly and aren't, or they simply don't know how. In either case, I'm going to show you and this is where things get exciting! More about that in a second though, first I want to show you how to get the RSI onto your charts with the proper settings we're going to use.

Chart Setup

Now we're getting to the heart and soul of the report and the system – Triple Filterd Forex. First we're going to adjust the RSI to suit our purposes and make it a little faster with a setting of 8. I'll show you how to apply this to your charts as well. First go to the “Navigator” button and under “Indicators”, either double click on “RSI” or you can drag and drop it onto your charts.

Once you've double clicked or dragged and dropped the RSI onto your charts, you should have a window that pops up with the input parameters. Like I mentioned, we're going to change some of the settings to suit our purposes.

These are the default MetaTrader 4 settings, but we're going to change the period to 8. Then we're going to set the Style to LimeGreen with a thickness of 2. Here's how that works.

Once you've done all that, go over to the Levels tab at the top. Remember when I mentioned the 50 line crossover? That's what we're going to be using, but remember, there's a twist coming and you're going to love it!

These are the default settings in MetaTrader. What we're going to do is delete these default settings and then enter our own value of 50. To do that simply left click on the 30 and then click delete over to the right. Next, double click on the 70 and then enter 50 instead and press the enter key on your keyboard. Once you've done that press the ok button on the window and you'll be ready to rock!

This is how the chart looks with the RSI. Remember that's the only indicator we're going to use and we're going to make it sit up and dance!

Adding Multiple Time Frames

Very simple, very easy to read! Now comes the fun part!

This is a 5 minute chart of the AUD/USD. Remember our secret weapon: multiple time frames? This is where it gets interesting!

I want you to open up 2 to 3 more charts. Each one the next higher time frame than the one before it and add the 8 period RSI to each chart. So we'll have a 5 minute chart, a 15 minute chart, a 1h chart and a 4h chart (optional). I like to have the 4h chart open because it can give me additional entry signals. Once you've done that, go to the Window tab on the top of the MetaTrader platform and press "Tile Vertically" like so...

Once you've done that, you should have a screen that looks like this....

Now, the 1 hour chart is going to be our longer term direction while the 15 minute chart is going to be our medium term direction. The 5 minute chart is the short term direction and the time frame we will be entering our trades on.

What we want to see is the RSI above the 50 line on the 1h and above the 50 line on the 15 minute chart, before we start looking for buy trades. What I like to see is the 1h and 15 minute RSI above the 50 line and for the 5 minute RSI to drop below the 50 line then pop back above it for an entry.

The opposite goes for sell trades: the 1 hour and 15 minute RSI must be below the 50 line and the 5 minute RSI must go above the 50 line then pop back below it for an entry. The cool thing about this approach is that if the long term and medium term charts aren't in order, there's no trade.

System Rules

So let's set the rules down so we can have them straight.

Buy Trade Rules for 5 minute time frame entry:

1. 1h RSI must be above the 50 line.
2. 15 minute RSI must be above the 50 line.
3. 5 minute RSI must drop below the 50 line, then pop back above it.
4. Stop loss below the recent swing low – 3 pips plus the spread.
5. Target 10-15 pips.

Sell Trade Rules for 5 minute time frame entry:

1. 1h RSI Must be below the 50 line.
2. 15 minute RSI must be below the 50 line.
3. 5 minute RSI must go above the 50 line then drop back below it.
4. Stop loss above the recent swing high – 3 pips plus the spread.
5. Target 10-15 pips.

Now, remember I have the 4h chart up there too and I'd bet you're wondering why. I mentioned earlier that I can use this to my advantage. Remember our rules about the next two time frames needing to be in line? Well, we can move this forward and use the 15 minute chart as our entry chart, as long as the 1h RSI and 4h RSI are both in line and the same rules apply.

Buy Trade Rules for 15 minute Time Frame Entry:

1. 4h RSI must be above the 50 line.
2. 1h RSI must be above the 50 line.
3. 15 minute RSI must drop below the 50 line then back above it.
4. Stop loss below the recent swing low – 3 pips plus the spread.
5. Target 20-25 pips.

Sell Trade Rules for 15 minute Time Frame Entry:

1. 4h RSI must be below the 50 line.
2. 1h RSI must be below the 50 line.
3. 15 minute RSI must go above the 50 line then drop back below it.
4. Stop loss above the recent swing high – 3 pips plus the spread.
5. Target 20-25 pips.

Next I'm going to show you a couple of trade examples...

Buy Trade Example

In this screenshot we have the RSI cross and close above the 50 level. Next, we're going to drop to the 15 minute chart and see what things look like.

Ok, very cool! Now we can drop to the 5 minute chart and wait for our entry.

So we enter the market as soon as the candle closes that caused the RSI to go above the 50 level here on the 5 minute chart. Our stop loss would go just below the swing low for 12 pips. Now, this was close to the end of the week so targeting a 1:1 Risk/Reward would have been a safe play. As you can see, the market gapped at the open of the next week and could have just as easily gapped down and taken out the trade as easily as it gapped upwards.

Sell Example

Here we have a GBP/JPY 1 hour chart. As you can see we had a nice run upwards and now we're getting ready to turn around.

Next, we drop to the 15 minute chart and check to make sure that things are looking good there as well.

We're looking very good here! Now let's go to the 5 minute chart and pin point our entry.

Here we go, short on the close of the candle that causes the RSI to drop below the 50. Our stop goes just above the swing high and since there's no weekend approaching we can target a 2:1 which was easily hit.

Pretty simple isn't it? I want to point out that this is a killer way to use just one single indicator and multiple time frames

Before I do though, I'd like to stop and talk about what you really need to get rich trading Forex and it's NOT what you think. There are a lot of systems and people out there that tell you that you need hundreds or thousands of pips a month to make a million bucks and that you MUST do it in as little time as possible. They whip us into a frenzy and convince us that it must be done that way. I'm here to tell you that that's not true. All you need is 10-15 pips per day. Some of you are laughing right now and saying, "No way! This guy is crazy"! I'm not and I'll prove it to you.

If you start with a \$1,000 account and make 3% of your starting daily balance for each day of the trading month, at the end of the month you'd have made about 80%. After 12 trading months you'd be sitting on more than 1.2 million dollars.

I sat down and did this the hard way by multiplying 1000 by 1.03. That will add 3% every time I hit the equals button on the calculator.

I figured that on average, there were about 20 trading days per month or approximately 240 trading days per year. So, I pressed the equals button 240 times and each time it added 3% to the balance. So figuring in an initial \$2 lot size with a 1:1 risk reward, which would be about 3% risk per trade, or 15 pips, that's all you need, just one trade per day and in a year you can retire! Not bad?

With the Triple Filter Forex System, you could do this several times a day in fact! Ok, ladies and gentlemen, there you have it, 1 indicator, 3 time frames, and you're well on your way. I'll see you in the forum!

Best Regards,

Russ Horn
