The information provided in this content is not intended for distribution to, or use by any person or entity in any jurisdiction or country where such distribution or use would be contrary to law or regulation or which would subject us to any registration requirement within such jurisdiction or country.

Hypothetical performance results have many inherent limitations, some of which are mentioned below. No representation is being made that any account will or is likely to achieve profits or losses similar to those shown. In fact, there are frequently sharp differences between hypothetical performance results and actual results subsequently achieved by any particular trading program and method or software. Old Tree publishing by users download and/or use of this report is indemnified fully by any such user in any and all and each respect possible.

One of the limitations of hypothetical performance results is that they are generally prepared with the benefit of hindsight. In addition, hypothetical trading does not involve financial risk and no hypothetical trading record can completely account for the impact of financial risk in actual trading.

For example, the ability to withstand losses or to adhere to a particular trading program or system in spite of the trading losses are material points that can also adversely affect trading results. There are numerous other factors related to the market in general or to the implementation of any specific trading program, which cannot be fully accounted for in the preparation of hypothetical performance results. All of which can adversely affect actual trading results.

We reserve the right to change these terms and conditions without notice. You can check for updates to this disclaimer at any time by visiting www.rapidresultsmethod.com.

Your use and reliance on the materials is based on your acceptance of such Terms and Conditions and policies as appear on the site.

The JUMP Trade

The Jump Trade is an early trade setup that we find in the Unordered Phase.

As you know, there are 3 market phases:

1. Trending Phase
2. Emerging Phase
3. Unordered Phase

The Trending and the Emerging Phases of the market we can freely trade, but the Unordered Phase is dangerous. The market chops up and down and has very little direction to it, so we want to stay away from any trading during this phase.

However, after much research and testing, I have found a particular setup that we CAN trade in the unordered phase. This is an occurrence that happens just before the Emerging Phase and has a high probability success rate. It's not a common trade setup, but when it happens, it can be profitable.

The different phases of the market are determined by the major moving averages, the 13 EMA, 34 EMA and 89 EMA. The 5 EMA is not important in determining the phases, but it is important to determine the Jump Trade.

The 5 and 13 EMAs together form the Ribbon, also known as the short term trend.

In the Unordered Phase, what we need to see is the Ribbon straddling the 89 EMA, this tells us there is likely going to be a tradable move of the market in the direction of the short term trend.

Although the 13 EMA will be in between the 34 and the 89 EMAs, the 5 EMA will be on the outside of the 89 EMA. This is a precursor to a move into a new trend.

Below you can see the market in the Unordered Phase. As the 13 EMA moves in between the 34 and the 89 EMAs, we are in the phase we want to avoid trading.

The Ribbon, for the most part, will be fully contained within the 34 EMA and 89 EMA boundaries.

Below you can see when the 5 EMA moves above the 89 EMA. Once the 5 moves above, the Ribbon is now straddling the 89 EMA. The 5 is above and the 13 is still below.

This straddling of the 89 EMA by the Ribbon is the signal that we can start to look for a Jump Trade.

Another way to think of it is the 89 EMA is piercing through the Ribbon on its way to start a new trend.

This signal happens just before the Emerging Phase.

All the other criteria must be met, than we can take a Ribbon trade. Because of the moving averages in the order they are, this Ribbon trade will allow you to jump into the market earlier, or get a jump on the Emerging Phase.

The Jump Trade must still meet all the requirements of any other trade setup.

The PSAR must be behind the price and the DPI must be the correct color.

In the example above, you can see that criteria for a Ribbon trade was met as price pulled back to the 13 EMA and then closed over the 5 EMA. The PSAR dots were under the price and the DPI is yellow. Everything is free and clear for a long trade.

The Jump Trade setup will basically extend the length of the Emerging Phase. We now have more room to get into a trade, and this is always a good thing!

Here are a couple of examples of when we would look for a Jump Trade. The pullback never happens, so there was no actual jump trade, but this is an image of what you would be looking for.

When the white dotted line, the 89 EMA, crosses into the Ribbon, we will be looking for a trade in the direction of the Ribbon.
